Applicant: Wu Docket No.: TSM03-0664
Serial No: 10/811,405 Art Unit: 2814
Date Filed: March 26, 2004
Title: Electrical Fuse For Silicon-On-Insulator Devices

CERTIFICATION OF FACSIMILE TRANSMISSION

I hereby certify that the following papers are being transmitted by facsimile to the U.S. Patent and Trademark Office at (571) 273-8300 on the date shown above:

- Certification of Facsimile Transmission (1 page)
- Election (2 pages)

Respectfully submitted,

Kristin Hayes
Legal Assistant

Confirmation Respectfully Requested

This facsimile is intended only for the use of the address named and contains legally privileged and/or confidential information. If you are not the intended recipient of this telecopy, you are hereby notified that any dissemination, distribution, copying or use of this communication is strictly prohibited. Applicable privileges are not waived by virtue of the document having been transmitted by Facsimile. Any misdirected facsimiles should be returned to the sender by mail at the address indicated on this cover sheet.

ELECTION

Dear Sir:

Claims 1-21 are pending in the present application. No new matter has been added.

The Office Action asserts that a restriction is required to one of the following inventions under 35 U.S.C. § 121:

Invention I: Claims 1-12, drawn to a method for forming dual gate oxides, classified in class 432, subclass 215; and

Invention II: Claims 13-21, drawn to an ion implantation method, classified in class 257, subclass 529.

The Office Action further states that "[b]ecause these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for the examination purposes as indicated is proper." As explained below, this is simply not correct.

For a restriction to be proper, the MPEP states that two criteria must be met.

There are two criteria for a *proper* requirement for restriction between patentably distinct inventions:

(A) The inventions must be independent (see MPEP § 802.01, § 806.04, § 808.01) or distinct as claimed (see MPEP § 806.05 - § 806.05(i));
and

(B) There *must* be a *serious* burden on the examiner if restriction is required (see MPEP § 803.02, § 806.04(a) - § 806.04(i), § 808.01(a), and § 808.02).

(MPEP § 803, 8th Edition, 2nd Revision, May 2004.) (Emphasis added.)

"If the search and examination of an entire application *can be made without serious burden*, the examiner *must* examine it on the merits, even though it includes claims to independent or distinct inventions." (MPEP § 803, 8th Edition, 2nd Revision, May 2004.) (Emphasis added.)

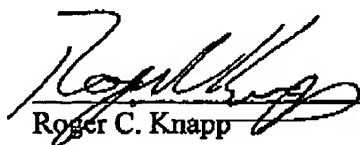

In this case, both inventions identified by the Examiner involve an electrical fuse for silicon-on-insulator devices. As such, a similar search *must be made* for both inventions to be a complete and thorough search. In other words, to search for one invention is necessarily similar to a search for the other invention.

As a result, the burden on the Examiner can hardly be considered a "serious burden" as required by the MPEP, and accordingly, Applicants respectfully request that the restriction requirement between Inventions I and II be reconsidered and withdrawn, allowing the prosecution to continue on all pending claims 1-21.

In the alternative, Applicants hereby elect Invention I, corresponding to claims 1-12, with traverse, and withdraw claims 13-21 from consideration.

Respectfully submitted,

8-12-05
